## ABOUT

Optimum Fund was established by a team of seasoned developers and enthusiastic entrepreneurs who possess extensive expertise in web3 technology and the cryptocurrency realm.

Our goal is to create a sustainable and profitable platform that caters to both investors and users in a fun and engaging way. We will continuously expand our offerings and adjust them according to current market conditions, providing our investors with a competitive edge.

## INCUBATING SERVICES

Optimum Fund will not only function as a de-fi protocol, but also provide incubation services to other projects. We will help improve outcomes through effective incubation, including contract development, DAPP development, marketing, web development, and design.

A small fee, ranging from 1-3%, will be included for buying and selling taxes of that specific project, and will be directed to Optimum Fund's protocol for liquidity and ecosystem development.

Strict procedures will be in place for any incubation services, and projects and project owners will be thoroughly vetted for the safety of our investors.

A KYC procedure will also be required for any project seeking incubation. All services will be done in-house by experienced professionals and a strong marketing team.

Contracts made for other projects will also be subject to third-party audits, and will be publicly available. Optimum Fund investors will also have early access to projects incubated on our platform.

## TUTORIAL PROGRAMS

Optimum Fund is launching tutorial programs to educate and empower investors with the knowledge and skills to gain an advantage in the market. These tutorials will target new traders who are new to the crypto and DeFi space.

We understand that there is a significant gap in crypto trading, with many investors missing out on the passive income opportunities offered by various projects and focusing solely on quick gains through token dumping.

This ultimately harms investors who utilize the services that a protocol has to offer. The main goal of these tutorials is to educate investors on protocol architecture and to charge a small monthly fee for registration, which will be renewable monthly or yearly.

A portion of this fee will be directed to the marketing wallet to further build the ecosystem. Subscribers will have access to weekly videos and newsletters on market trends and will be taught technical analysis from basic to advanced levels.

This education will help reduce the risk of paper-hands and minimize the plummeting of newly launched projects. We will also offer separate Web3 classes for developers who want to transition to Web3 technology.

## THE CHEST

The Chest will be a component of the Optimum Fund ecosystem where investors can stake their OMF tokens and receive guaranteed allocations in various projects that will be incubated by us. Before an IDO raise, snapshots will be taken of staked OMF tokens in The Chest.

To prevent last-minute buying for the purpose of participating in IDOs, it will be mandatory for individuals to have staked their OMF tokens in The Chest two weeks prior to an IDO raise.

Some of the taxes will also be directed back to The Chest to maintain the sustainability of the protocol. The incubation process plays a vital role in the sustainability of The Chest, as investments of OMF tokens are required before any IDO raise. This not only provides a stable floor price for the token, but also keeps The Chest running.

OMF staking offers an innovative solution to an outstanding and lasting staking rewards system. The OMF non-custodial model gives stakers control of their tokens with no high-risk operations. Further details about the Chest application will be released at a later date.

## CAMPAIGNS AND COMMUNITY

Optimum Fund is a community-driven project. We recognize the importance of strong communities in the success of a project and will be implementing new and creative ideas to strengthen the Optimum Fund ecosystem.

As previously mentioned, Optimum Fund holders will have the advantage of investing in IDO raises of projects that have been incubated by us. After the token launch, we will announce the number of OMF tokens required to participate in IDOs and whitelist presales.

In order to ensure sustainability for the OMF chart and the entire ecosystem, we will implement a comprehensive marketing strategy utilizing various platforms, including social media.

Our experienced marketing team and distinguished advisors will execute aggressive marketing tactics. Additionally, partnerships and collaborations will be utilized to increase exposure for the project. These partnerships will be announced through our main social media channels and updated on our website.

We will conduct thorough evaluations when considering potential collaborations to secure the most advantageous partnerships in the industry. Progressive and consistent marketing efforts will be maintained to attract new investors and retain current ones.

## CONTRACTS & PRESALE

The Optimum Fund ecosystem will feature several contracts, all of which will be deployed on the Arbitrum network.

As outlined in our roadmap, we plan to deploy the Optimum Fund on multiple blockchain networks in the future. Additional contracts will also be deployed on various chains at a later stage.

To ensure the integrity and security of these contracts, we will engage a reputable and well-known audit firm to conduct a thorough third-party audit.

We firmly believe in the quality of our contracts, but we recognize the importance of independent audits in building trust and confidence among our investors.

Once the contracts have been audited, they will be made available for public viewing. Additionally, the contracts will be verified on [arbiscan.com](https://arbiscan.com), allowing the public to view the code themselves.

Following the completion of the contract audit, we will proceed with the presale funding.

The presale will be held on PandaSale and the liquidity will be added on Oreoswap. Information regarding the presale will be shared on our official website and social media platforms.

The Orchard is a decentralized finance (DeFi) game that will be integrated into the Optimum Fund ecosystem. We believe that it is possible to have fun while making profits, and The Orchard represents a unique opportunity for investors to do just that. To ensure that the flow of the OMF token is not disrupted, The Orchard will have its own native token, TOD.

Investors may be wondering how this benefits the OMF token. The Orchard will have its own small pre-sale raise, with the proceeds used to provide liquidity for the TOD token. To participate in this pre-sale, investors will need to acquire OMF tokens, stake them in The Chest for at least one month prior to the IDO raise for The Orchard. Additionally, a significant amount of OMF tokens will need to be staked in The Chest to qualify for participation in the pre-sale. This serves as a way to reward holders, stakers, and believers in Optimum Fund, and also serves as an incentive to increase the floor price of OMF.

As stated earlier, we at Optimum Fund are committed to staying at the forefront of new developments and concepts in the DeFi space, and The Orchard represents another utility that our ecosystem offers. The Orchard will have different tax structures from the OMF token, which will be communicated in due time. Clear instructions will also be provided to investors who wish to participate in The Orchard.

The staking system for The Orchard will be different from that of The Chest. Stakes in The Orchard cannot be unstaked, but investors will receive a daily ROI of 2% and will be able to maximize their returns by compounding the TOD token.

We strongly encourage investors to compound their tokens in order to enjoy higher yield rewards. Additionally, taxes will be injected back into the program to make it more sustainable and feasible.

## How the Orchard Works

Welcome to The Orchard, a land where your investments grow like vines, yielding bountiful returns in the form of wine. After the pre-sale raise, investors will receive TOD tokens, which they can deposit on The Orchard, owned by Old Man Charlie.

Just like Old Man Charlie harvests his vines and turns them into profitable wine, your TOD deposits will grow vines in the farm. The more TOD you deposit, the more vines you grow, and the more wine you'll be able to harvest and sell for profits.

Think of it like this: your TOD is the seed, the vines are your investment, and the wine is your reward. You can sell your wine, in the form of TOD, on any trusted exchange, but we recommend using Oreoswap. To maximize your returns, we advise investors to compound their rewards by depositing more TOD, thereby increasing your daily returns by 2%.

Keep in mind that the TOD token price will fluctuate, so it's essential to keep an eye on the market. Rest assured that the Orchard token contract will be thoroughly audited by a third-party company, ensuring the integrity and security of your investment.

To commence the game:

1. Buy \$TOD on Oreoswap. Hit the approve button then fill in how many \$TOD worth of vines you want to grow, then click "GROW VINES".
2. The game will start immediately and your vines will start to grow. Vines will be harvested later on and processed into wine which you can later sell for \$TOD.
3. Enjoy the process as your vines continue to grow and more wine is processed for you.
4. The wine (\$TOD) can be sold on Oreoswap or compounded back to The Orchard.

## CROSS-CHAIN

The Optimum Fund team has carefully evaluated several blockchain networks and has determined that Fantom is the best fit for our first deployment. Fantom offers several advantages that make it an ideal choice for our platform.

These include its low transaction fees, robust security measures and fast transaction speeds which are critical for the smooth operation of our ecosystem.

Additionally, deploying on multiple chains will allow us to offer distinct utilities and functionalities to our users. Each chain will have its unique characteristics and advantages. By deploying on multiple chains, we will offer our users a wider range of options and tailor our services to their specific needs. This is in line with our goal of providing maximum flexibility and value to our users.

Furthermore, deploying on multiple chains will also increase the resilience and decentralization of our platform. This will ensure that our ecosystem remains operational even in the event of any unforeseen issues with a particular chain. It will also increase the accessibility of our platform, allowing users from different regions to participate in our ecosystem.

Overall, deploying on Fantom is a strategic decision that will provide multiple benefits to our users and position the Optimum Fund ecosystem for long-term success.

# OPTIMUM FUND TOKENOMICS

The \$OMF token has a fixed supply of 10 million, ensuring scarcity and stability. In addition, the \$OMF smart contract incorporates a 0% transaction tax. There will also be no transfer tax between wallets.

Name: Optimum Fund

Ticker: \$OMF

Total Supply: 10,000,000

Contract address: TBA

Network: Arbitrum

# Supply distribution

Presale: 47%

Liquidity: 40%

Team: 3%

Marketing: 1%

Optimum Fund ecosystem: 9%

Total: 100%

OPTIMUM FUND ECOSYSTEM

\*Team tokens will be locked for 4 months.

\*Liquidity locked for 1 year

# Roadmap

## Phase 1

- Develop and deploy smart contract.
- Create website.
- Create social media accounts.
- Start of marketing campaign.
- 

## Phase 2

- Presale
- Marketing
- Launch
- Launch of incubation programs.
- Launch of The Chest.
- Launch of Tutorial Programs.

## Phase 3

- Further exchanges listing.
- Development of the Orchard
- Test for sustainability of the Orchard.
- Further influencer collaborations

## Phase 4

- The Orchard audit.
- Launch of the Orchard.
- Further influencer collaborations.
- Roadmap 2.0
